

Business plan and convenor's report: ISO/IEC JTC1 SC22/WG20 - INTERNATIONALIZATION

PERIOD COVERED:

September 2001 – August 2002

SUBMITTED BY:

Convenor WG20
Arnold F. Winkler
Unisys B203-14
2476 Swedesford Road
Malvern, PA 19355
Tel: 610-648-2055
Fax: 610-695-5473
E-mail: Arnold.Winkler@unisys.com

1. MANAGEMENT SUMMARY

1.1 SCOPE

Identification of elements relevant to the work of SC22 that may be affected by differences in language, culture, customs and habits; and for these elements, develop standards that enable applications to be portable across differing cultural practices; and develop a Technical Report that describes a framework for nations to provide those elements

1.2 PROJECT REPORT

Project number

Description

Editors

22.13 (published)

Second edition of TR 10176: "Guidelines for the preparation of programming language standards".

An amendment has been approved to align Annex A to ISO 10646. (see project 22.13.1)

Akio Kido and Makoto Noda

22.13.1 (published)

Amendment #1 to TR 10176: "Guidelines for the preparation of programming language standards" to align Annex A with ISO 10646. The TR has been published in 2001, not as an amendment but as the 3rd edition of the Technical Report .

Arnold F. Winkler

22.13.2

TR 10176, 4th edition: "Guidelines for the preparation of programming language standards" to align Annex A with ISO 10646.
Arnold F. Winkler

22.30.01 (published)

TR 11017: "Framework for internationalization"

T.K. Sato

22.30.02.01 (umbrella project - no standard associated)
Functionality of the internationalization of applications
Keld Simonsen

22.30.02.02 (published)

ISO/IEC 14651: International string ordering. This standard has been approved and published.

Alain LaBonté

22.30.02.02.1

Amendment #1 to ISO/IEC 14651: International string ordering, to align the template table with the rapidly growing repertoire of ISO/IEC 10646.

Alain LaBonté

22.30.02.03

ISO/IEC 14652: Specification method for Cultural Conventions. This project has changed to produce a TR.

Keld Simonsen

22.15435 (withdrawn)

ISO/IEC 15435: Internationalization API. This project has been withdrawn.

Keld Simonsen

22.15897 (published)

ISO/IEC 15897: Procedures for registration of cultural elements. This project was created through the fast track process from EN 12005 and assigned to WG20 for maintenance.

Keld Simonsen

22.15897 revision

ISO/IEC 15897: Procedures for registration of cultural elements. An US contribution to align the registration process with the process for character set registrations in ISO/IEC 2375 was prepared and submitted to the editor.

Keld Simonsen

For details see later discussion of projects in section 5.

1.3 COOPERATION AND COMPETITION

Internationalization is considered a high priority issue by many groups that develop standards, most important amongst them are:

- * Unicode Consortium
- * Subcommittees and individual working groups of JTC1, e.g. SC22/WG4 - COBOL
- * ISO TC46/SC2
- * CEN, CDSG, CEN/TC304, various working groups
- * W3C, the World Wide Web Consortium

WG20 is cooperating with the above mentioned groups, either through already existing liaisons, or through individual contacts.

2. PERIOD REVIEW

2.1 MARKET REQUIREMENTS

WG20 believes that through the proliferation of PCs in homes world-wide, and the ubiquitous World Wide Web, internationalization has become a very important factor in the creation of applications and thus all programming languages.

2.2 ACHIEVEMENTS

ISO/IEC 14651 has been approved and is published on CD.

ISO/IEC TR 10176, Amendment #1 has been published as the third edition of TR 10176.

2.3 RESOURCES

Please see 6.1.2 for the general resource situation. WG20 has to prioritize its work to make best use of the scarce resources available.

3. FOCUS FOR THIS PLANNING PERIOD

3.1 DELIVERABLES:

- A. WG20's focus for 2002 and 2003 will be to amend the international string ordering standard ISO/IEC 14651 to align the character repertoire with the rapidly growing repertoire of ISO 10646, parts 1 and 2 .
- B. TR 14652 – Specification methods for cultural conventions, will be published asap.
- C. WG20 works on amending ISO/IEC 15897 – Registration of cultural elements, to align the registration process with the process for character set registrations in ISO/IEC 2375.
- D. WG20 will ballot the 4th edition of TR 10176 to align the table in Annex A with the repertoire of ISO/IEC 10646.
- E. WG20 starts collecting contributions for a potential new work item on the functionality of APIs for internationalization.

3.2 STRATEGIES:

WG20 has 2 principle strategies:

- A. Technical excellence
- B. Liaisons with all interested parties

3.2.1 RISKS

The risks with the chosen strategies are:

- A. The quest for technical excellence slows down the process
- B. Liaisons with individual interests create complex requirements which are harder to meet
- C. Lack of resources slows down the process

3.2.2 OPPORTUNITIES

- A. Technical correctness of the WG20 work ensures that resulting standards can and will be implemented immediately after publication, sometimes even before.
- B. WG20 develops standards and Technical Reports with contributions and requirements from many liaisons. This ensures comprehensive standards that provide excellent service to a wide variety of users.

- C. Unique opportunities present themselves to reference versioned data files of the Unicode Character Database instead of copying derivative tables into JTC1 standards, e.g. the identifier table in Annex A of ISO/IEC 10176.

3.3 WORK PROGRAM PRIORITIES

Culturally correct processing is important for all facets of data processing. Culturally correct ordering of data is one of the most complex tasks due to contradicting requirements from various parts of the user community. WG20 was using most of its resources to complete IS 14651, a standard that allows international string ordering with the option to tailor the output to satisfy specific user communities (e.g. geographic areas, cultural groups, businesses). Amending the template table that defines the sort order with new characters from the rapidly growing repertoire of ISO/IEC 10646 is time critical. In light of the extensive use of international search engines this task deserves highest priority in the work of WG20.

The registry of cultural elements is helpful for design and implementation of internationalized applications. To ensure reliable quality of registrations, WG20 is putting priority on amending the registration process to allow independent review of submissions.

4. Membership of SC22/WG20

4.1 Liaisons and representatives to and from SC22/WG20

4.1.1 Liaisons from WG20

Liaison from WG20	Organization	Subject
open	SC2/WG2	Character Sets
Keld Simonsen	SC22/WG15	POSIX
open	SC22/WG5	Fortran
Keld Simonsen	SC22/WG14	C
Keld Simonsen	SC22/WG21	C++
Keld Simonsen	CEN/TC 304	I18n, character set technology
Alain LaBonté	CEN/TC 304	I18n, character set technology
Alain LaBonté	SC35	User System Interface
Keld Simonsen	TC37/SC2/WG3	Alphabetic ordering
Ken Whistler	Unicode	Character sets and I18N
Keld Simonsen	W3C I18N	I18N for the WWW
Keld Simonsen	TC46/SC2	Transliteration
	SC32/WG3	SQL

4.1.2 Liaisons to WG20

Liaison to WG20	Organization	Subject
open	SC2/WG2	Character Sets
Keld Simonsen	SC22/WG15	POSIX
Ann Wallace	SC22/WG4	COBOL
open	SC22/WG5	Fortran
Jim Melton	SC32/WG3	SQL
Keld Simonsen	SC22/WG14	C
Keld Simonsen	SC22/WG21	C++
Marc Küster	CEN/TC 304	I18n, character set technology
Ken Whistler	Unicode	Character sets and I18N
open	W3C I18N	I18N for the WWW
open	SC35	User interface
John Clews	TC46/SC2	Transliteration

I would like to emphasize that 2 very important liaisons are currently open, namely the liaisons to and from SC2/WG2.

Note:

CEN/TC304 is now called European Localization Requirements, the TC is presently without a secretariat and thus "dormant".

WG20 also maintains contacts with CEN CDSG, the Cultural Diversity Steering Group, through Marc Küster, member of WG20 and chair of the CDSG.

4.1.3 Liaison requests

None at this moment.

4.1.4 Representatives

None at this moment.

4.2 Meetings of SC22/WG20

1	November 1991	Sunnyvale	USA
2	April 1992	Paris	France
3	October 1992	Québec	Canada
4	April 1993	Copenhagen	Denmark
5	October 1993	Tokyo	Japan
6	April 1994	Oxford	United Kingdom
7	October 1994	Cupertino	USA
8	May 1995	Paris	France
9	September 1995	Copenhagen	Denmark
10	April 1996	Kyoto	Japan
11	September 1996	Vienna	Austria
12	Spring 1997	Québec	Canada
13	November 1997	Cairo	Egypt
14	June 1998	Dublin	Ireland
15	October 1998	Tel Aviv	Israel
16	May 1999	Malvern	USA
17	November 1999	Copenhagen	Denmark
18	May 2000	Québec	Canada
19	Oct. Nov. 2000	Malvern	USA
20	May 2001	Tübingen	Germany
21	October 2001	Malvern	USA
22	June 2002	Tromsø	Norway
<u>Planned meetings:</u>			
23	Spring 2003	Busan (?)	South Korea
24	Autumn 2003	California	USA

4.3 Convener of WG20

Arnold Winkler is the convener of SC22/WG20 until the SC22 plenary in August of 2002.

5. Projects of SC22/WG20

5.1 Status of active projects

5.1.1 TR 11017: Framework for internationalization (published)

a Framework for internationalization

- b JTC1 22.30.01
- c A type 3 Technical Report
- d T. K. Sato
- e The TR 11017 has been published in English and French. The project is completed.

5.1.2 Second edition of TR 10176 (published)

- a Guidelines for the preparation of programming languages standards
- b JTC1 22.13
- c A Type 3 Technical Report
- d A. Kido and M. Noda
- e The TR has been published. The project is completed.

5.1.3 Third edition of TR 10176 (published)

- a Amendment to "Guidelines for the preparation of programming language standards"
- b JTC1 22.13.1
- c According to ITTF this is a new edition of the Type 3 Technical Report.
- d Arnold F. Winkler
- e Update was needed for Annex A due to the rapid additions to the repertoire of ISO 10646. The new Annex A has been approved, the TR has been published as the third edition of the TR (there were no amendments to TRs until 2002). This project is completed.

5.1.4 Fourth edition of TR 10176 (in DTR ballot)

- a Amendment to "Guidelines for the preparation of programming language standards"
- b JTC1 22.13.2
- c A new edition of a type 3 Technical Report
- d Arnold F. Winkler
- e Update was needed for Annex A due to the additions to the repertoire of ISO 10646. The fourth edition has been submitted for DTR ballot.

5.1.5 ISO/IEC 14651 - International string ordering (published)

- a International string ordering (Method for Comparing Character Strings and Description of the Common Template Tailorable Ordering)
- b JTC1 22.30.02.02
- c International Standard ISO/IEC 14651
- d Alain LaBonté
- e The standard has been approved and is published on CD as requested by WG20.

5.1.6 ISO/IEC 14651, Amendment #1 - International string ordering (FDAM ballot)

- a International string ordering (Method for Comparing Character Strings and Description of the Common Template Tailorable Ordering). Amendment #1 revises the Common Template Table to account for the expanded repertoire of ISO/IEC 10646.
- b JTC1 22.30.02.02
- c International Standard ISO/IEC 14651
- d Alain LaBonté
- e The standard has been approved and is published on CD as requested by WG20.
- f WG20 initiated work to align the repertoire of characters with the expanded repertoire of ISO 10646, parts 1 and 2. The FPDAM #1 ballot resulted in approval of the FPDAM. The editor has prepared the disposition of comments and the new text for the FDAM ballot. WG20 is submitting N938 (disposition of comments) and N939 (final text for DAM ballot) to SC22 for DAM ballot processing. WG20 has started work on a new amendment #2 in its task to deal with the additions to the repertoire of ISO/IEC 10646.

5.1.7 Cultural convention specification TR (ISO/IEC TR 14652)

- a Specification method for cultural conventions
- b JTC1.22.30.02.03
- c Technical Report ISO/IEC TR 14652
- d Keld Simonsen
- e WG20 changed the document type from Standard to a Type 1 Technical Report, due to the fact that this document is extremely contentious.
- f The disposition of comments from the second DTR ballot and the final text of TR 14652 have been prepared by the editor for publication. The document visibly identifies sections as “**controversial**” for which no agreement could be reached in the working group.

5.1.8 Internationalization API standard - ISO/IEC TR 15435 (project withdrawn)

- a Internationalization API standard
- b JTC1 22.15435
- c International Standard ISO/IEC 15435
- d Keld Simonsen
- e Project is withdrawn.
- f The SC22 N3328 letter ballot resulted in withdrawal of project 22.15435, the ballot results are in SC22 N3362.

5.1.9 ISO/IEC 15897 - Procedures for registration of cultural elements (published)

- a European registration standard
- b JTC1 22.15897
- c International Standard ISO/IEC 15897
- d Keld Simonsen
- e This international standard is the result of a fast-track processing of EN 12005 to become an international standard. SC22 assigned the maintenance of this standard to WG20.

5.1.10 ISO/IEC 15897 - Procedures for registration of cultural elements – revision #1

- a European registration standard for cultural elements
- b JTC1 22.15897
- c International Standard ISO/IEC 15897
- d Keld Simonsen
- e This international standard is the result of a fast-track processing of EN 12005 to become an international standard. SC22 assigned the maintenance of this standard to WG20.
- f A first draft of the revision has been balloted, the editor is preparing a disposition of comments for the many objections to the new text. The US has prepared an extensive contribution to align the registration process with the process in ISO/IEC 2375, used successfully in SC2. The contribution has been given to the editor for consideration in the revision of 15897. A new draft document is being prepared by the editor.
It is discouraging to see that National Bodies show little interest in this standard. According to SC22 N3341 only 5 NBs approved the CD, 2 disapproved, 1 abstained, and 13 did not vote at all. This shows that many NBs don't care, and only ¼ approve.

5.2 Candidate projects

5.2.1 Functionality of Internationalization (no future work is anticipated)

- a Functionality of the internationalization of applications
- b JTC1 22.30.02.01
- c A number of standards, see subproject descriptions below
- d Keld Simonsen
- e This is an umbrella project

This project is the umbrella project for the development of specific standards for functionality of the internationalization of applications, such that users can specify their cultural requirements, and obtain consistent behavior across system platforms and applications.

5.2.2 TR on the functionality of I18N-APIs and current practices:

SC22 resolution 2001-26 from Hawaii: "SC22 further requests that SC22/WG20 develop an NP for a Type 2 TR, or a Type 3 TR, which addresses the functionality of 15435 and addresses current practice in existing programming languages."

Following this request, WG20 assigned action items to all interested NBs to provide input for a type 3 TR – Pat Hall from the UK will act as the collector and temporary editor until WG20 decides in the next meeting, if it wants to prepare a NP for such work.

6. Conclusions and requests

6.1 Issues

6.1.1 Cultural and linguistic adaptability and user interfaces (CLAUI)

The CLAUI meeting, planned for Malvern, USA, in 2001 was cancelled due to a total lack of contributions and agenda items. As the convener of one of the involved committees, I refuse to accept the notion, that a face to face meeting needs to be conducted without documented subjects to discuss.

I also believe, that the CLAUI business can easily be dealt with in electronic form, there is no justification for expensive travel around the world for a 1-2 day meeting (especially without contributions).

6.1.2 Resources for standards development

The biggest issue in SC22/WG20 - as in many other standards developing organizations - is that companies can not afford to make enough resources available for the support of the infrastructure of formal standards development. For some participants in our meetings, the meeting time is the only time they can spend on the projects. Additionally, travel budgets are tight, especially after the economic downturn since 2000, thus restricting the participation even further. WG20 has currently stable participation from 4 NBs and sometimes participants from other NBs. Meeting participation varies between 5-8 people.

6.1.3 WWW home page for SC22/WG20

The home page address is <http://www.dkuug.dk/JTC1/SC22/WG20/>

The web site contains:

- * Introduction and explanation of SC22/WG20 activities
- * Working drafts of standards from SC22/WG20
- * SC22/WG20 documents for electronic distribution

Keld Simonsen maintains the home page, Arnold Winkler as the convener provided most WG20 documents in web-ready form.

6.1.4 Document distribution

SC22/WG20 has distributed documents in paper form to an extensive distribution list for many years. With advise and help from the SC22 secretariat, the distribution method has been switched to mainly web based distribution. The need for paper copies has gone from 85 to less than 10 - quite a success.

6.2 Requests to the SC22 plenary

- 6.2.1 Forward WG20 N927 for DTR ballot for TR 10176, fourth edition.
[Resolution R2002-06-02]**
- 6.2.2 Approve Marc W. Küster as the future editor for project 22.13 - TR 10176.
[Resolution R2002-06-03 and attachment #1]**
- 6.2.3 Forward WG20 N939 for FDAM ballot for ISO/IEC 14651, Amendment #1, together with the disposition of comments in WG20 N938.
[Resolution R2002-06-04]**
- 6.2.4 Support the WG20 request that Amendment #1 to ISO/IEC 14651 be published on CD.
[Resolution R2002-06-05]**
- 6.2.5 Forward N960 as the disposition of comments to the DTR2 ballot, and N961 as the text for TR 14652 for publication to ITTF.**
